# ECS417U Lab sheet for week 6

Exercise 1

Rewrite the simple personal webpage in exercise 5 of week 4 lab sheet following a two-column CSS layout template which can be downloaded at the course website (the link is next to the link for this lab sheet). After following the template it should look like below when it is first loaded in a browser display window (note that you should adjust the width of each column, among others):

More specifically, there should be two columns side by side. In the left column, there should be an image of yourself followed by your name and contact details. Note that the image and contact details should also been put side by side. There should also been a navigation menu which provides links to different contents of your webpage. These contents are shown in the right column. For instance, when you click "home" displayed in the left column as a link, a welcome message will be shown as above in the right column. If you click "links", the following webpage is shown:

Remember that we've rewritten the simple personal webpage in two columns using table in week 4 lab exercise 5. Through this exercise you are able to learn how a typical two-column webpage is created using CSS, which is more popular nowadays.

Exercise 2

Now after finishing exercise 1, you should be more familiar with CSS layout. Let's try something more complex. This time, there will be a header and a footer apart from the two-column structure and the navigation menu is on the right hand side. A template together with a tutorial can be found at http://www.456bereastreet.com/lab/developing_with_web_standards/csslayout/2-col/ The new webpage should look like this:
